PROJECTS

**Improving Adversarial Robustness of Gaussian Process
Regression-based Classifier**

May 2023 - Mar 2024

This project aimed to develop an innovative adversarial detection method to safeguard deep learning models, including Convolutional Neural Networks (CNNs) and ResNet architectures, from adversarial attacks. Leveraging Gaussian process regression, we extracted vital statistical features from clean and adversarial images, reducing the reliance on extensive adversarial datasets. Our two-step approach, which involved model training and image enhancement techniques, significantly improved detection performance, offering promising results against specific attack types and opening doors to real-world applications and robust defense strategies.

Personal Portfolio

Tech Stack : HTML , CSS , JavaScript , Bootstrap .

- Designed and developed a fully responsive personal portfolio website to showcase projects and skills.
